Population

A region's economy thrives or dives because of the people who choose to live there. That choice may occur by being born there and desiring to stay, or a more deliberate one of choosing to relocate from somewhere else. Monitoring change in the size and movement of population is an important barometer of well-being. Some of us monitor these changes as an insect might gauge the shifting sands while most don't pay much attention. But the barometer is a good metaphor for population change since it can presage more notable events, such as lackluster business attraction due to lack of workers.

Education

The level of education of our workforce is a critical factor for economic and community development. It often provides insight into the skill levels of a local area. The metrics provided here focus on the attainment of degrees and high school graduates' higher education intent. The type of work (occupations) residents perform can also assist in understanding skill levels.

Commuting

In Indiana, most workers commute to a job, either within their home county or beyond. Patterns of commuting are significant in showing the labor supply. The county *labor force* represents workers who reside in the county no matter where they work. Two types of commuting patterns are provided here - the Census 2000 *benchmark* and the annual data tabulated from state income tax returns that can help provide a more current view.

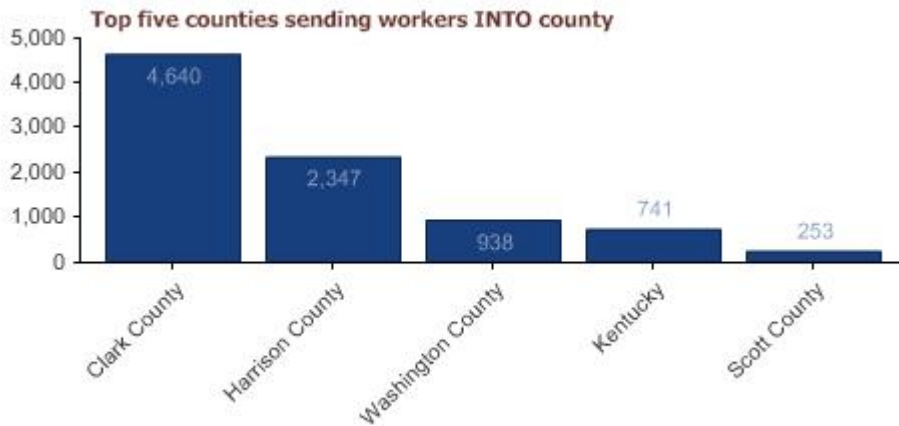

Commuting Data, 2012

Earnings and Income

Industry employment is tabulated as jobs by place-of-work. Keep in mind that people may hold multiple jobs and that each job is counted by its industry. Note: The income figures and changes are not adjusted for inflation.
